

Multimedia Learning Hub – Additional Reading Materials

Multimedia in Education

Educational multimedia can combine written explanations with visual and audio information. When used appropriately, it can support understanding and maintain learner attention.

Accessibility

Websites should be designed so that as many people as possible can use them. Alternative text, captions, readable text and clear navigation are useful accessibility practices.

Responsive Design

Responsive web design allows pages to adapt to phones, tablets and computers. Flexible layouts, responsive images and CSS media queries are common techniques.

File Organization

A website is easier to maintain when related resources are stored in separate folders. Common folders include css, images, audio, video and resources.

Performance

Large images, audio files and videos can slow down a website. Compressing media and using suitable file sizes can improve loading speed.

Final Note

A good multimedia learning website should be clear, accessible, organized and easy to navigate. Multimedia should support the learning purpose rather than distract from it.
