

Multimedia Learning Hub - Lecture Notes

Introduction

Multimedia combines text, images, audio, video, animation and interactive content. It is useful in education because it can make information easier to understand.

HTML5 Multimedia

HTML5 provides audio and video elements for adding media directly to webpages. The controls attribute provides playback controls.

Images

Images can improve explanations and visual appeal. The alt attribute provides alternative text for meaningful images.

Semantic HTML

Elements such as header, nav, main, section, article and footer describe the purpose of webpage content.

CSS

CSS controls fonts, colors, backgrounds, borders, spacing and layout on webpages.

Good Practice

Use clear navigation, organized folders, suitable media sizes and readable content. Test links and media before publishing.
